## **Net Metering and Surplus Compensation Enrollment Form**

Pasadena Water and Power (PWP) solar customers are now eligible to receive compensation for any net surplus electricity generated by their solar system on or after January 31, 2010.

To receive this benefit, you must complete the Net Metering and Surplus Compensation Enrollment Form and elect to receive compensation in Section 2.

Your compensation rate will depend on which net metering method you indicate in this form, and whether you own renewable energy credits or attributes. As a PWP solar customer, you may choose to have your net metering calculated on an annual basis **or** on each regular bi-monthly billing cycle (monthly for commercial customers). <u>Customers who choose monthly / bi-monthly net metering receive a higher net surplus electricity compensation rate.</u>

Please complete this form (other side) and return it to Pasadena Water and Power, Public Benefit Programs, P. O. Box 7115, Pasadena, CA 91109-9911

**New and existing solar customer must complete this form.** You will continue to be billed under your existing net metering option and, unless you have previously submitted a Compensation Request Form, will receive **no compensation** for net surplus electricity generation.

## FURTHER INFORMATION ON PWP NET METERING AND SURPLUS ELECTRICITY

- 1. "Net Surplus Electricity" is the balance of unused electricity (measured in kWh) that accumulates when a customer's solar system generates more electricity than he or she uses during a given billing period.
- 2. Customers are required to make a written election to receive compensation. Customers may change their election to receive or not receive compensation at any time by submitting a new enrollment form, which can be downloaded from www.PWPweb.com/solar
- 3. Compensation for net surplus electricity will be applied as a credit on the customer's electric bill. A customer may request a cash-out of net surplus compensation, rather than receive a credit, when the value exceeds \$50 or when he or she closes the electric account.
- 4. "Net Metering" is how net surplus electricity is calculated or metered. PWP can calculate a customer's net surplus electricity annually, monthly (for commercial customers) or bi-monthly (for residential customers.)
- 5. Once a customer elects a net metering option on this form, he/she may not change it for period of 12 months.
- 6. A renewable energy credit or attribute is the environmental benefit associated with the renewable electricity generated by a solar PV system. Though uncommon, some solar lease or power purchase agreements transfer ownership of the renewable attributes to the system vendor.
